

### **Checkmates - List of Changes**

- Keep icons for menu items, icons were found to be more popular during user testing.
- Add a walkthrough or tutorial to explain the icons, since many users were not aware of what they did.
- Add identifying text to menu buttons. Possibly might not need identifying text with walkthrough.
- Redesign application aesthetics using new color palette, current color was too bright for users. Users also complained about site not looking finished or professional.
- Since the link at the bottom was not clicked often, move Logout button to the bottom right left corner of the application and change color.
- (Stretch Goal) Allow users to specify a due date and display date below task on homepage. One user compared the app to Asana, and mentioned how they expected due dates.
- Add colors signaling priority levels for the tasks. Again, user expected some sort of way to prioritize certain tasks.
- (Stretch Goal) Push notification when the user receives a task. Intent for user to prioritize tasks was to show others what needs to be done immediately, push notifications would be a good way to help users accomplish this task.
- Implement Settings Menu to allow users to change their group, password, and other settings. Users mentioned need to be able to re-enter personal information after they submitted it.
- Add group password information to invite emails. Users were unsure about what information the email sent, and whether it gave them the password and group name needed.
- Add check marks or other button to signify completed tasks. Users want to be able to view what they've completed.
- Add brief text explanations above certain forms (group creation). Users were confused during the form entry since they did not know about the use of groups in the app.
- Add any missing confirmation messages.
- Enlarge user's name slightly (or bold text) to help user's easily view text.
- Specify during account creation whether or not the user is creating a group or joining a group.
- Tweak Sign Up confirmation page and include a button taking the user back to login or take the user to the home page.
- Move Sign Up form text link at the bottom of the login page to button below the login button in a similar style to initial start page button.
- Add an undo option after adding a task on the confirmation screen.
- Consider re-implementing menu if Settings button crowds the top navigation.
- Tweak priority colors.
- Consider white vs color background.
- Add home text below logo.
